

Location: United States of America **Service:** Pleasure/Sports Fishing Boat **Waterjet Model:** HJ274

New Quonset Point 25 Uses HJ274 Jet to Best Advantage

In recent years the coastline of North East USA has become the domain of the waterjet powered pleasure cruiser. One of the latest additions to the New England jetboat family is the Quonset Point 25, an exclusively waterjet powered vessel with potential in a wide variety of work and pleasure applications.

The Quonset Point 25 is offered as a highly versatile boat for sport and commercial fishing, cruising and family adventure boating. Each hull is personalised to owners' requirements, with a Hamilton HJ274 waterjet coupled to a 315hp Yanmar engine as standard.

Builders, Triangle Marine Engineering, has a 14-year history in refinishing and rebuilding sail and power vessels, and over the years has evolved into a fully-fledged design and boat building operation. Bob Paterson of TME became hooked on

waterjets after a test drive of the Safe Sea rescue boat, and believes they are the next generation of propulsion. Major advantages are the simplicity of design and maintenance of the jet, and the versatility it adds to the hull form, allowing it to perform both in the shallow coves of Narragansett Bay as well as off shore. The Quonset Point 25 has exceeded all expectations.

Another important benefit Triangle Marine wanted to offer customers was the assurance of nationwide service and support by factory authorized Technicians from Yanmar and HamiltonJet.
